## Summary

---

Computer Science undergraduate with experience in software engineering, backend development, and data analytics. Skilled in building scalable applications, automating workflows, analyzing datasets, and developing real-time systems. Experienced with Python, JavaScript, SQL, APIs, and visualization tools to support data-driven decision-making and operational efficiency.

## Technical Skills

---

- **Languages:** Python, JavaScript, TypeScript, SQL, C# (Basics)
- **Data Analytics:** Data Cleaning, EDA, Statistical Analysis, Data Visualization
- **Libraries & Tools:** Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn
- **Frontend:** React.js, Tailwind CSS, Monaco Editor
- **Backend & APIs:** Node.js, Express.js, Flask, REST APIs, Socket.io
- **Databases & Infra:** MySQL, PostgreSQL, MongoDB, Redis, Docker
- **Tools:** Git, GitHub, Postman, Linux (Basics)

## Experience

---

### RupeeRedee

*Data Analyst Intern*

Gurugram, India

June 2025 – August 2025

- Processed and analyzed 100k+ records through optimized data pipelines, improving data accessibility and reporting efficiency.
- Reduced database query latency using indexing and query optimization techniques.
- Automated operational workflows, reducing manual effort by 40%.
- Generated analytical insights from internal datasets to support business decision-making.
- Collaborated in an agile development environment to implement backend and data-related features.

## Projects

---

### Collaborative Code Editor Platform

*React, TypeScript, Node.js, Socket.io, Docker*

- Built a real-time collaborative coding platform with authentication, room management, live presence, and shared code execution.
- Implemented CRDT-based synchronization using Yjs and Monaco Editor for seamless multi-user editing.
- Integrated Socket.io for real-time participant tracking and collaborative updates.
- Designed secure containerized code execution using Docker with resource and timeout restrictions.
- Used Redis and PostgreSQL for persistence, session management, and metadata storage.

### Movie Recommendation System

*Python, Flask, Scikit-learn, NLP*

- Developed a recommendation engine using content-based filtering and machine learning techniques.
- Performed preprocessing and feature engineering on movie datasets for improved recommendation quality.
- Applied cosine similarity and ranking metrics to evaluate recommendation relevance.
- Deployed the solution through Flask APIs for real-time recommendations.
- **Live Demo:** [netflix-recommendation-model.onrender.com](https://netflix-recommendation-model.onrender.com)

### Student Management System

*Node.js, Express.js, MongoDB*

- Developed RESTful APIs for student data management and retrieval.
- Designed structured database schemas and optimized querying workflows.
- Implemented scalable backend architecture for efficient data handling.

## Education

---

**Dronacharya College of Engineering**

*B.Tech in Computer Science Engineering (AI & ML)*

Gurugram, India

September 2023 – October 2027

## Certifications

---

- Python and Artificial Intelligence – Kaggle, Infosys, Edunet
- SQL Certification – Infosys / Edunet
